Muhib Khan

AI Engineer | Generative AI | Machine Learning
Bannu Township, Pakistan | 331-993-3737 | muhibkhan9795@gmail.com | github.com/muhib01793

PROFESSIONAL SUMMARY

Aspiring AI Engineer focused on building practical Generative AI and machine-learning applications with Python. Hands-on experience with LLMs, RAG, LangChain, agentic workflows, API integration and SQL-backed applications. Familiar with FastAPI/Flask, vector search concepts, embeddings, Docker, Git and GitHub Actions. Seeking an AI/ML internship to contribute to real-world projects while developing production-level engineering skills.

PROJECT EXPERIENCE

AI Appointment Booking Assistant

- Built an end-to-end AI-powered appointment booking workflow using Python, Gemini API and Flask.
- Designed a conversational flow that collects the user's name, purpose of visit, preferred date and time step by step in natural language.
- Stored appointment records in SQLite for persistence and implemented automated confirmation of each booking.

AI Chatbot — LLM & LangChain

- Developed a conversational AI application using an LLM and LangChain with multi-turn conversation memory, so replies stay consistent with earlier context.
- Added structured, tool-oriented interaction so the chatbot can call functions/tools to complete tasks instead of only generating text.

RAG-Based Document Question Answering

- Built a Retrieval-Augmented Generation pipeline that answers questions from custom user documents.
- Implemented text splitting, embedding generation and vector search to retrieve the most relevant chunks for each query.
- Passed the retrieved context to an LLM to generate grounded, document-based responses and reduce hallucination.

GenAI Multi-Tool Application

- Worked on a Streamlit application combining multiple GenAI features in one interface: AI chat, document Q&A, summarization and multimodal image analysis.
- Integrated the Gemini API for text and image understanding, giving users a single place for several AI-assisted tasks.

Agentic AI Workflow — n8n

- Created automated AI workflows in n8n that connect LLM reasoning steps with external tools and APIs.
- Automated repetitive manual tasks by chaining triggers, API calls and AI decision steps into one agentic pipeline.

ML Data Analysis Project

- Performed data cleaning, exploratory data analysis and visualization using Pandas, NumPy and Matplotlib.
- Ran machine-learning experiments with Scikit-learn, including model training and evaluation to compare performance.

ENGINEERING PRACTICE

- Build applications with reusable Python modules, environment variables and structured project layouts.
- Use Git/GitHub for version control and practice Docker-based packaging for reproducible deployments.
- Explore CI/CD workflows with GitHub Actions and develop API-based AI applications beyond notebook prototypes.

EDUCATION

Bachelor's Degree (Completed) — University of Science & Technology, Bannu
Coursework focused on AI & Software Engineering

TECHNICAL SKILLS

- **Programming:** Python, SQL, HTML, CSS, JavaScript
- **AI / GenAI:** LLMs, Generative AI, RAG, Agentic AI, Prompt Engineering, LangChain, n8n

- **Machine Learning:** Scikit-learn, supervised learning fundamentals, model evaluation
- **Data:** Pandas, NumPy, Matplotlib, data cleaning, exploratory analysis
- **AI Engineering:** Embeddings, vector search concepts, API integration, function/tool calling
- **Backend:** FastAPI, Flask, REST APIs
- **Databases:** MySQL, SQLite, PostgreSQL fundamentals
- **DevOps:** Docker, Git, GitHub, GitHub Actions, CI/CD fundamentals
- **Tools:** VS Code, Jupyter Notebook

CAREER OBJECTIVE

To join an AI/ML internship where I can apply Python, Generative AI, RAG and machine-learning skills to real-world problems, collaborate with experienced engineers, and grow toward production-ready AI engineering.
